“Understanding the Impact of Functional Deficits following Traumatic Brain Injury”

1. 80% of traumatic brain injuries fall in the severe category.

True

False

2. The MPAI-4 means the following...

A. My Personal Assessment Instrument-4th Edition

B. Minnesota Personality Assessment Inventory-4th Edition

C. Mayo Portland Adaptability Inventory-4th Edition

D. Mayo Portland Assessment Inventory-4th Edition

3. The MPAI-4 measures functional problems following brain injury.

True

False

4. The Abilities Index measures

A. Physical Functioning

B. Cognitive Functioning

C. Psychological Functioning

D. Instrumental Activities of Daily Living

E. A and B

F. C and D

G. All the above

5. In post-hospital care, all types of treatment have been found to be effective from admission to discharge.

True

False

Continuing Education Questionnaire

6. In post-hospital care, the best outcomes (e.g., most change from admission to discharge) were found in those who required supported living?

True

False

7. Rehabilitation is senseless after one year of recovery because there are no more gains to be made to improve functioning or reducing supervision?

True

False

8. Depression occurs at a rate of about 34% at any time in post-hospital recovery, while Anxiety can occur at a rate of 30-70% at any time in recovery. A multidisciplinary approach should include psychology or counseling services to address this problem?

True

False

9. If the scores on the Mayo Portland drop (get lower), then the person receiving services may be able to have less supervision.

True

False

10. Post-hospital care is complex. Therefore, we should be considering the following things in our treatments...

A. Addressing Depression and Anxiety to reduce complications of recovery.

B. Address behavioral impairments due to the negative effects on recovery.

C. Consider lifetime challenges as we treat, rather than expecting that spontaneous recovery will “fix” the problems.

D. All of the above.

E. None of the above.
