## “Residual Behaviors Influencing TBI Recovery”

1. Traumatic brain injury results in impairments of cognitive abilities, physical functioning, and/or emotional-neurobehavioral functioning.

- A. True
- B. False

2. Of those sustaining a traumatic brain injury, 80% are severe while 20% fall in the mild category.

- A. True
- B. False

3. Behaviors can be an opportunity to learn about the patients and their deficits.

- A. True
- B. False

4. Synergy is referred to as the combination of which of the following:

- A. Behavior, Attitudes
- B. Behavior, Attitudes, Values
- C. Behavior, Attitudes, Values, Culture

5. Neurological behaviors are those that occur in response to:

- A. Neurological injury
- B. Injury location
- C. Psychosocial variables
- D. A & B
- E. B & C

6. Frontal Lobe Injury is the most likely cause of neurological behavior impairments.

- A. True
- B. False

## Continuing Education Questionnaire

7. Psychiatric problems following injury can cause behavioral problems.

- A. True
- B. False

8. Financial problems and concerns can increase behavior problems following traumatic brain injury.

- A. True
- B. False

9. There is a difference in rate of change between those neurologically injured without behavior problems versus those with behavior impairments.

- A. TBI and behavior impairments improve faster
- B. TBI without behavior impairments improve faster
- C. Supported living shows the greatest improvement

10. Horn and Lewis showed that neurobehavioral impairments can improve, but may take 2-3 times longer to show response to therapeutic treatments.

- A. True
- B. False
