

Continuing Education Questionnaire

Neurobehavioral Impairment and Post-hospital Rehabilitation NeuroInstitute Continuing Education Series

Date: February 25, 2022

Write Your Name: _____

Once this form is completed, please submit to institute@sevitahealth.com

1. What is normal behavior?
 - a. A range of actions made by an organism within their environment
 - b. Response of the organism to various stimuli or inputs
 - c. When pigs smile
 - d. A & B
 - e. C only

2. Behavior has many different facets. Which of the following is NOT true?
 - a. Behavior is complex
 - b. Behavior does not involve cognitive (thinking) processing
 - c. Cause of behavior are not always apparent
 - d. Things external to the person can influence behaviors

3. The origins (etiology) of behavior change include the following:
 - a. Genetics
 - b. Education level
 - c. Biochemistry, brain tissue, psychosocial variables
 - d. None of the above

Continuing Education Questionnaire

4. There are primary and secondary neuropathological processes that contribute to behavior changes and dysregulation. Which of the following lobe(s) are involved?
 - a. Bilateral Occipital lobes only
 - b. Bilateral Temporal lobes only
 - c. Frontal and Parietal lobes
 - d. Temporal and Frontal lobes

5. Secondary pathology that influences behavior can be surprising. Which condition(s) is not a condition that produces behavior changes?
 - a. Diabetes
 - b. Hypopituitarism
 - c. Thyroid disease (hypo or hyper)
 - d. Cataracts

6. Neurobehavioral syndrome has been described in the literature. Based on the research, the criteria for this type of condition is all but the following:
 - a. > 6 months duration
 - b. Irritability, Agitation and Aggression
 - c. Impaired Awareness
 - d. Impaired Problem Solving

7. Integrated rehabilitation modeling – which statement is untrue?
 - a. Remediation is the first focus of care
 - b. Compensation is the second focus of care when remediation plateaus
 - c. Rehabilitation is a fluid process that allows for forward and backward movement as patients progress
 - d. Rehabilitation works best when each discipline focuses on their specialty

Continuing Education Questionnaire

8. Which statement is true regarding medications and neurobehavioral disorders?
- a. Medication can help to manage negative behaviors
 - b. Medication that are off label should not be used
 - c. Medication only works in the first 6 months of treatment
 - d. Medication only helps those with temporal impairment
9. Which of the following is accurate about the use of medications for neurobehavioral conditions?
- a. Insomnia, attention, and initiation can be treated with medication after brain injury
 - b. There is no adequate treatment for depression or anxiety
 - c. Irritability is something you learn to live with
 - d. Fatigue does not occur after brain injury
10. The following are positive behaviors to use as part of treatment with neurobehavioral disorders. Which is not a positive behavior that is a focus of care?
- a. Social courtesy
 - b. Self-calming
 - c. Treating a friend to dinner
 - d. Safety awareness
