“Resource Facilitation for Return to Work following Brain Injury: Evidence to Practice”

1. Approximately what percentage of people with brain injury return to work?

- A. 16%
- B. 40%
- C. 84%
- D. 20%

2. What are the Barriers to Return to Work?

- A. Individual and Family barriers
- B. Social- Environmental barriers
- C. Systemic barriers
- D. All of the above

3. What is one consequence of Barriers to Return to Work?

- A. Decreased risk for co-morbidities
- B. Decreased cost to society
- C. Loss of pre-injury vocational skills
- D. Increase of economic productivity for patient and family

4. What is Resource Facilitation?

- A. A program that provides brain injury specific education and promotes awareness of resources to individuals and families.
- B. A program that works to ensure collaboration, integration, and coordination between providers and community-based resources.
- C. A program that navigates the person and their family to needed brain injury-specific community and vocational supports and services.
- D. All of the above

5. Resource Facilitation addresses which of the two types of barriers to return to work?

- A. Instrumental and brain injury-specific?
- B. Medical and brain injury-specific?
- C. Social and brain injury-specific?
- D. Medical and social barriers?

Continuing Education Questionnaire

6. In “First Randomized Control Trial of Resource Facilitation,” 23 people with acquired brain injury were recruited to be either in Resource Facilitation or in the Control group. The results showed ___% of the RF group was employed at follow-up compared to ___% of the control group.

- A. 40, 84
- B. 64, 36
- C. 84, 40
- D. 36, 64

7. Why were the findings from “Potential Economic Impact of Resource Facilitation for Post-Traumatic Brain Injury Workforce Re-Assimilation” important for RF?

- A. It found that the total economic impact in lost wages is \$31,017,775 and suggested that RF could help alleviate some of that amount through the return to work/return to school program.
- B. It found that the total economic impact in lost wages is \$21,017,775 and suggested that RF could help alleviate some of that amount through the return to work/return to school program.
- C. It found that there was some economic impact in lost wages, but did not suggest a significant amount that needed RF intervention.
- D. It found that RF solves the economic impact in lost wages.

8. What is the significance of using tests such as the VIS-R, Activities of Daily Living Scale, Survey of Unmet Needs, and MPAI-4 throughout the duration of the Resource Facilitation program?

- A. They are used for baseline testing and help guide providers toward necessary resources.
- B. They are used upon discharge and record data on patient progress and ensure that everything possible has been done to help the patient.
- C. Both a and b are correct
- D. None of the above

9. “Randomized Control Trial 2” found that RF patients were 7.0 time more likely to participate in productive _____-based work than the control group.

- A. Resource
- B. Service
- C. Group
- D. Community

10. There are two levels of intervention in Resource Facilitation. What are they and what barriers do they address?

- A. Systems Level: Environmental and Social Barriers; Service Level: Individual and Family Barriers
- B. Systems Level: Environmental and Social Barriers; Rehabilitation Level: Individual and Family Barriers
- C. Systems Level: Individual and Family Barriers; Rehabilitation Level: Environmental and Social Barriers
- D. Service Level: Environmental and Social Barriers; Systems Level: Individual and Family Barriers
